TEMT

TRANSPORTATION EMISSION MEASUREMENT TOOL · IIM BANGALORE

SAMPLE DATA · 169 synthetic shipments for demonstration

Freight emissions report

Sample FMCG company (synthetic data)

FY 2025–26 · TEMT emission factors

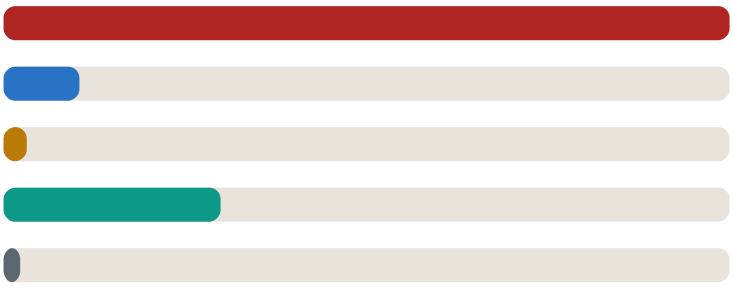

Total emissions (WTW)	Emission intensity	Shipments	vs FY 2024–25
332.5	**22.8**	**169**	**-7.9%**
t CO2e	g CO2e / t-km	334 legs	361.2 t previously

Where the emissions arise

Tank-to-wheel (vehicle operation)	**240.9 t**	72%
Well-to-tank (energy provision)	**86.4 t**	26%
Hubs and terminals	**5.21 t**	2%

Emissions by transport mode

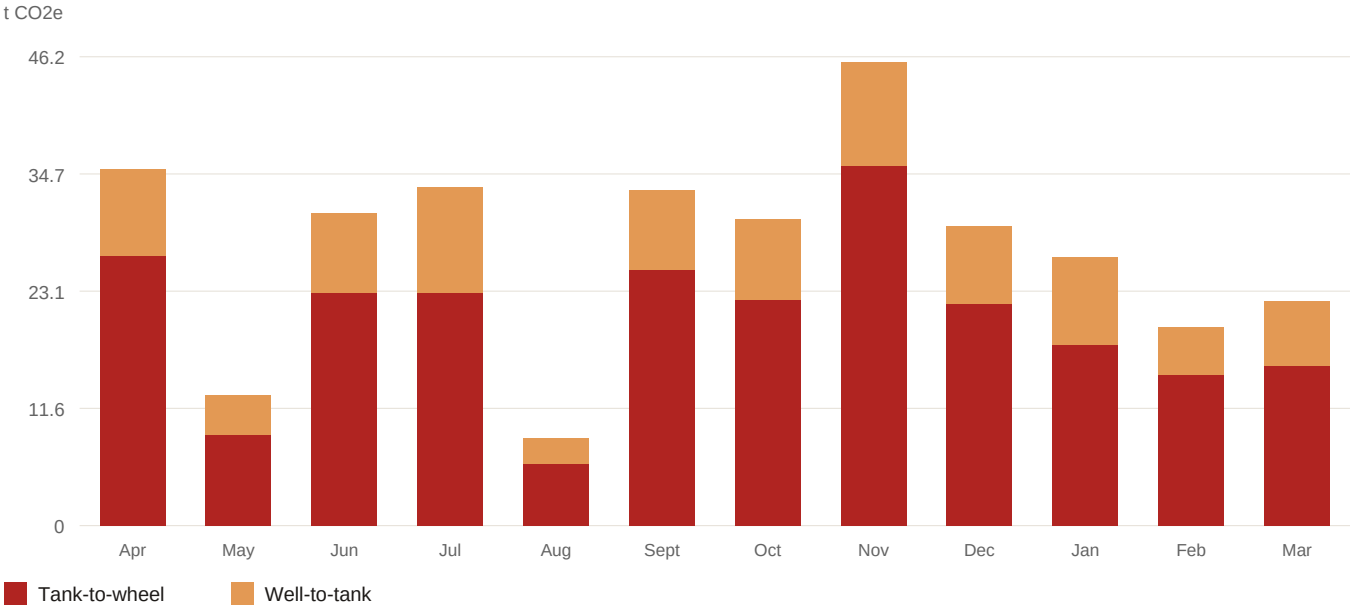

Road	**228 t**	68.6%
Rail	**23.82 t**	7.2%
Air	**7.26 t**	2.2%
Sea	**68.15 t**	20.5%
Hubs and terminals	**5.21 t**	1.6%

Generated 27 September 2026 · TEMT emission factors · engine temt-engine-2.1.0. Prepared with TEMT, developed by the TCI–IIMB Supply Chain Sustainability Lab, IIM Bangalore. Emissions are quantified to ISO 14083:2023 on a well-to-wheel basis with TEMT's India-specific emission factors.

MONTHLY PROFILE

How emissions moved through the year

KEY INSIGHTS

What the data says

1. Road is your largest source. 69% of emissions from 24% of tonne-kilometres.
2. Your heaviest lane. Hosur -> Delhi accounts for 11% of emissions across 6 shipments.
3. Move long road hauls to rail: up to 154.2 t CO2e avoidable. 53 road legs of 500 km or more with at least 8 t of cargo could move by rail with 30 km road drayage at each end. Biggest lanes: Hosur -> Delhi; Baddi -> Chennai; Baddi -> Hyderabad. Check rail access, capacity and transit time before committing.
4. Replace short air legs with road: up to 6.45 t CO2e avoidable. 2 air legs of up to 2,500 km. Moving time-flexible consignments to an intermediate truck would avoid most of their emissions.

SCOPES

GHG Protocol classification

Scope	t CO2e	Share
Scope 3 · Category 4	287.7	86.5%
Scope 3 · Category 9	42.6	12.8%
Scope 1 · own fleet fuel	2.17	0.7%
Scope 2 · own fleet electricity	0.05	0%

BUSINESS UNITS, LANES AND VEHICLES

Breakdown

Business units

	t CO2e	Share	Tonne-km	g/t-km
Personal Care	114.1	34.3%	49,67,029	23
Home Care	112.4	33.8%	53,13,673	21.1
Foods	106	31.9%	42,85,895	24.7

Top lanes

Hosur -> Delhi	38.14	11.5%	16,01,320	23.8
Hosur -> Jaipur	20.26	6.1%	7,70,691	26.3
Hosur -> Rotterdam	20.24	6.1%	17,60,073	11.5
Hosur -> Kochi	20.15	6.1%	7,30,877	27.6
Baddi -> Chennai	19.16	5.8%	4,71,662	40.6
Baddi -> Hyderabad	15.94	4.8%	2,94,057	54.2
Baddi -> Rotterdam	14.06	4.2%	10,80,446	13
Silvassa -> Delhi	13.86	4.2%	10,19,633	13.6
Baddi -> Kolkata	13.62	4.1%	2,62,205	51.9
Hosur -> Chennai	11.21	3.4%	3,53,541	31.7

Road vehicle classes

	t CO2e	Share	Tonne-km	g/t-km
Tractor-trailer · diesel	124.1	54.4%	22,15,390	56
Multi-axle heavy truck · diesel	51.92	22.8%	7,95,537	65.3
Heavy rigid truck · diesel	44.66	19.6%	4,47,395	99.8
Medium rigid truck · diesel	3.49	1.5%	40,635	85.9
Intermediate rigid truck · diesel	2.06	0.9%	17,629	117.1
Small commercial vehicle · diesel	1.02	0.4%	5,540	183.5
Light commercial vehicle · diesel	0.6	0.3%	2,080	288.2
Intermediate rigid truck · CNG	0.15	0.1%	1,313	117

Data quality

	t CO2e	Share	Tonne-km	g/t-km
Default factors	330.3	99.3%	1,45,41,559	22.7
Primary data (measured fuel, energy or carrier value)	2.22	0.7%	25,038	88.6

RECALCULATED WITH THE SAME ENGINE

Reduction opportunities

Move long road hauls to rail

53 road legs of 500 km or more with at least 8 t of cargo could move by rail with 30 km road drayage at each end. Biggest lanes: Hosur -> Delhi; Baddi -> Chennai; Baddi -> Hyderabad. Check rail access, capacity and transit time before committing.

-154.2 t
CO2e potential

Replace short air legs with road

2 air legs of up to 2,500 km. Moving time-flexible consignments to an intermediate truck would avoid most of their emissions.

-6.45 t
CO2e potential

Consolidate long hauls into larger trucks

6 long-haul legs use trucks of 12 t GVW or less. Consolidating loads into a 12–20 t truck lowers emissions per tonne-kilometre.

-0.45 t
CO2e potential

Replace default factors with primary data

98% of emissions use default factors. Ask your top carriers for fuel or energy records; ISO 14083 prefers primary data and it usually shows the effect of your own improvements.

SEBI BUSINESS RESPONSIBILITY AND SUSTAINABILITY REPORT

BRSR mapping

Indicator	Value	Note
Principle 6 · Scope 3 GHG emissions (freight share)	330.26 t CO2e	Leadership indicator. Category 4 and Category 9 transport, well-to-wheel.
Principle 6 · Scope 1 and 2 GHG emissions (own fleet share)	2.22 t CO2e	Own fleet fuel (Scope 1) and electricity for own electric vehicles (Scope 2). Add to your site-level Scope 1 and 2 inventory.
Freight emission intensity	22.8 g CO2e per tonne-km	Physical intensity for year-on-year comparison.
Freight emissions per INR crore of revenue	0.027 t CO2e	Revenue entered in Settings: INR 12,500 crore.
Methodology	TEMT factors	ISO 14083-aligned; factor sources listed in the methodology section.

Year-on-year

	FY 2024–25	FY 2025–26	Change
Total t CO2e	361.2	332.5	-7.9%
Intensity g CO2e/t-km	26.1	22.8	-12.7%
Shipments	161	169	

TRANSPARENT BY DESIGN

Methodology and factors

TEMT emission factors

TEMT's India-specific emission factors from the TCI–IIMB Supply Chain Sustainability Lab, following the GLEC Framework v3.3: TEMT's own road and courier values, validated through its ISO 14083 certification; GLEC v3.3's India values for rail, domestic air and electric trucks; and GLEC v3.3 defaults for shipping, inland waterways and hubs.

- This selection includes 169 synthetic sample shipments generated for demonstration. They are not the organisation's actual freight.
- Emissions are reported well-to-wheel (WTW) in kg or tonnes CO2e, split into tank-to-wheel (vehicle operation), well-to-tank (energy provision) and hub operations, following ISO 14083:2023 and the GLEC Framework v3.3 with TEMT's India-specific emission factors.
- Default factors are estimates for typical operations. Replace them with primary fuel or energy data from carriers where available.
- Distance type follows ISO 14083: road, rail, waterway and sea legs use the shortest feasible distance (SFD), estimated unless an actual distance was supplied; air legs use the great-circle distance (GCD), with GLEC's 95 km routing allowance for international flights (GLEC v3.3's Indian domestic air value already includes routing).
- Scope classification follows the GHG Protocol: own fleet -> Scope 1/2; purchased transport -> Scope 3 Category 4; customer-paid downstream transport -> Scope 3 Category 9.
- TEMT is certified to ISO 14083 (December 2024) and its information security to ISO/IEC 27001:2022.

Factor	WTT	TTW	Unit	Source	Legs
