Emissions by transport mode

MONTHLY PROFILE

How emissions moved through the year

KEY INSIGHTS

What the data says

- 1 Road is your largest source. 68% of emissions from 24% of tonne-kilometres.
- 2 Your heaviest lane. Hosur -> Delhi accounts for 12% of emissions across 6 shipments.
- 3 Move long road hauls to rail: up to 148.7 t CO2e avoidable. 53 road legs of 500 km or more with at least 8 t of cargo could move by rail with 30 km road drayage at each end. Biggest lanes: Hosur -> Delhi; Baddi -> Chennai; Hosur -> Jaipur. Check rail access, capacity and transit time before committing.
- 4 Replace short air legs with road: up to 5.44 t CO2e avoidable. 2 air legs of up to 2,500 km. Moving time-flexible consignments to an intermediate truck would avoid most of their emissions.

SCOPES

GHG Protocol classification

Scope	t CO2e	Share
Scope 3 · Category 4	280.8	86.2%
Scope 3 · Category 9	42.56	13.1%
Scope 1 · own fleet fuel	2.17	0.7%
Scope 2 · own fleet electricity	0.04	0%

BUSINESS UNITS, LANES AND VEHICLES

Breakdown

Business units

	t CO2e	Share	Tonne-km	g/t-km
Personal Care	112.1	34.4%	49,65,753	22.6
Home Care	109.4	33.6%	53,10,548	20.6
Foods	104	31.9%	42,82,815	24.3

Top lanes

	t CO2e	Share	Tonne-km	g/t-km
Hosur -> Delhi	37.62	11.6%	16,01,320	23.5
Hosur -> Jaipur	20.54	6.3%	7,70,691	26.7
Hosur -> Rotterdam	20.11	6.2%	17,60,073	11.4
Hosur -> Kochi	19.83	6.1%	7,30,877	27.1
Baddi -> Chennai	18.22	5.6%	4,71,662	38.6
Baddi -> Hyderabad	15.28	4.7%	2,94,057	51.9
Baddi -> Rotterdam	13.95	4.3%	10,80,446	12.9
Silvassa -> Delhi	13.75	4.2%	10,19,633	13.5
Baddi -> Kolkata	12.45	3.8%	2,62,205	47.5
Hosur -> Chennai	11.07	3.4%	3,53,541	31.3

Road vehicle classes

	t CO2e	Share	Tonne-km	g/t-km
Tractor-trailer · diesel	122.1	54.8%	22,15,390	55.1
Multi-axle heavy truck · diesel	55.43	24.9%	7,94,126	69.8
Heavy rigid truck · diesel	37.01	16.6%	4,47,395	82.7
Medium rigid truck · diesel	3.62	1.6%	40,635	89.1
Intermediate rigid truck · diesel	2.49	1.1%	17,629	141.2
Small commercial vehicle · diesel	1.26	0.6%	5,540	227.7
Light commercial vehicle · diesel	0.79	0.4%	2,080	379.5
Intermediate rigid truck · CNG	0.22	0.1%	1,313	168.8

Data quality

	t CO2e	Share	Tonne-km	g/t-km
Default factors	323.3	99.3%	1,45,34,079	22.2
Primary data (measured fuel, energy or carrier value)	2.21	0.7%	25,038	88.2

RECALCULATED WITH THE SAME ENGINE

Reduction opportunities

Move long road hauls to rail

53 road legs of 500 km or more with at least 8 t of cargo could move by rail with 30 km road drayage at each end. Biggest lanes: Hosur -> Delhi; Baddi -> Chennai; Hosur -> Jaipur. Check rail access, capacity and transit time before committing.

-148.7 t

CO2e potential

Replace short air legs with road

2 air legs of up to 2,500 km. Moving time-flexible consignments to an intermediate truck would avoid most of their emissions.

-5.44 t

CO2e potential

Consolidate long hauls into larger trucks

6 long-haul legs use trucks of 12 t GVW or less. Consolidating loads into a 12–20 t truck lowers emissions per tonne-kilometre.

-0.65 t

CO2e potential

Replace default factors with primary data

98% of emissions use default factors. Ask your top carriers for fuel or energy records; ISO 14083 prefers primary data and it usually shows the effect of your own improvements.

SEBI BUSINESS RESPONSIBILITY AND SUSTAINABILITY REPORT

BRSR mapping

Indicator	Value	Note
Principle 6 · Scope 3 GHG emissions (freight share)	323.31 t CO2e	Leadership indicator. Category 4 and Category 9 transport, well-to-wheel.
Principle 6 · Scope 1 and 2 GHG emissions (own fleet share)	2.21 t CO2e	Own fleet fuel (Scope 1) and electricity for own electric vehicles (Scope 2). Add to your site-level Scope 1 and 2 inventory.
Freight emission intensity	22.4 g CO2e per tonne-km	Physical intensity for year-on-year comparison.
Freight emissions per INR crore of revenue	0.026 t CO2e	Revenue entered in Settings: INR 12,500 crore.
Methodology	GLEC v3.2 India	ISO 14083-aligned; factor sources listed in the methodology section.

Year-on-year

Total t CO2e	355.2	325.5	-8.4%
Intensity g CO2e/t-km	25.7	22.4	-13.1%
Shipments	161	169	

TRANSPARENT BY DESIGN

Methodology and factors

GLEC Framework v3.2 · India defaults

Latest published defaults (October 2025). Indian road intensities originate from TCI–IIMB Supply Chain Sustainability Lab research; rail, air, sea, inland waterway and hub values follow GLEC Module 2.

- Emissions are reported well-to-wheel (WTW) in kg or tonnes CO₂e, split into tank-to-wheel (vehicle operation), well-to-tank (energy provision) and hub operations, following ISO 14083:2023 and the GLEC Framework v3.2.
- Default factors are estimates for typical operations. Replace them with primary fuel or energy data from carriers where available.
- Distances marked as estimated come from straight-line distance multiplied by network factors or from sea-lane routing; actual distances were used where supplied.
- Scope classification follows the GHG Protocol: own fleet -> Scope 1/2; purchased transport -> Scope 3 Category 4; customer-paid downstream transport -> Scope 3 Category 9.
- Production TEM T's ISO 14083 and ISO/IEC 27001:2022 certifications apply to that platform and its stated scope.
